

Gripbox[®] Ductbox

The new generation of retention sockets

Ductbox adaptors are integral to the design of Gripbox and allow many possible options to suit varying site requirements.

A standard Gripbox combined with a Ductbox offers many variations for cable ducting. In addition, the box is easily configured on-site, offering single or dual duct entry points that are securely attached.

The box height is adjustable with a range of adaptor plates which are easily fitted. The Ductbox can swivel through a full 360 degrees allowing the easy alignment of ducting.

Extensions are available without a Ductbox where cable ducting is not required. These offer an extremely strong assembly and allow for a deeper pole embedded depth.
