

Gripbox[®] Retention Sockets

The new generation of pole retention

Simple - Single actuation point.

Safe - Quick clamping positive stop operation.

Secure - Lockable factory set controlled grip.

Gripbox has been developed for the secure retention of highway poles and is especially suited to passive safe styles. It offers the advantage of a controlled grip without damaging the pole or its coating. This has been achieved by the development of a patented assembly which enables a powerful grip to be applied over a large surface contact area.
